

PRESS RELEASE

Adocia Announces Two Data Presentations at the 53rd Annual Meeting of the European Association for the Study of Diabetes

Lyon, France, September 5, 2017 - 6 pm CEST – Adocia (Euronext Paris: FR0011184241-ADOC), the clinical biopharmaceutical company focused on developing innovative formulations of approved proteins for the treatment of diabetes, announced today that two abstracts presenting promising data supporting the ongoing development of two of the Company's programs, BioChaperone[®] Lispro and BioChaperone[®] Glargine GLP-1, have been selected for presentation at the 53rd European Association for the Study of Diabetes (EASD) Annual Meeting to be held September 11 – 15, 2017 in Lisbon, Portugal.

BioChaperone Lispro, Adocia's most advanced product which is ready to enter Phase 3, is an ultra-rapid acting formulation of insulin lispro. The present study showed that BioChaperone Lispro improved post-prandial glycemic control compared to insulin lispro (Humalog[®], Eli Lilly) when repeatedly administered to people with type 1 diabetes for 14 days. Ultra-rapid insulins aim to improve post-prandial glycemic control and to offer greater dosing time flexibility to people with diabetes compared to currently commercialized prandial insulins, such as Humalog[®].

BioChaperone Glargine GLP-1s are combinations of the gold-standard basal insulin glargine (Lantus[®], Sanofi) with leading GLP-1 receptor agonists ("GLP-1") dulaglutide (Trulicity[®], Eli Lilly) or liraglutide (Victoza[®], Novo Nordisk). The present poster demonstrates that the proprietary BioChaperone[®] technology enables solubilization of insulin glargine at neutral pH, which in turns allows its combination with multiple GLP-1 receptor agonists in solution. In people with type 2 diabetes, 2-in-1 combinations of basal insulin with a GLP-1 have been shown to improve glycemic control over each agent used separately, while reducing side effects.

"The diversity of our portfolio illustrates Adocia's commitment to address different medical needs for people with diabetes." commented Dr. Stanislav Glezer, Chief Medical Officer of Adocia "The positive data we present at EASD reflect our efforts in two very distinct treatment options. On the one hand, BioChaperone Lispro is a next-generation prandial insulin that has consistently shown an ultra-rapid-acting profile, which translates into a tighter blood glucose control and supports potential dosing at mealtime. On the other hand, combining gold-standard basal insulin glargine with major GLP-1 products should deliver improved medical outcomes for people with type 2 diabetes who need treatment intensification. We look forward to share this data and further our dialogue with leaders in the diabetes community at the EASD Annual Meeting."

Details of the posters on BioChaperone Lispro and BioChaperone Glargine GLP-1 are outlined below:

Poster Presentation: Ultra-rapid BioChaperone Lispro improves post-prandial blood glucose excursions versus insulin lispro in a 14-day treatment study in subjects with type 1 diabetes

Poster Number:	686
Session:	PS 049 Insulin analogues: new insulins
Date and Time:	Tuesday, September 12, 12:00 PM - 01:00 PM CEST
Location:	Poster Hall
Presenting Author:	Dr. Grégory Meiffren

Poster Presentation: BioChaperone technology enables the development of glargine GLP1-RA (liraglutide and dulaglutide) formulations

Poster Number:	793
Session:	PS 061 Incretins: new formulations
Date and Time:	Tuesday, September 12, 12:00 PM - 01:00 PM CEST
Location:	Poster Hall
Presenting Author:	Dr. Rémi Soula

About the European Association for the Study of Diabetes Annual Meeting

The EASD Annual Meeting is one of the largest European medical meetings dedicated to the latest developments and insights in diabetes and diabetes therapies. The meeting attracts key opinion leaders, company executives, scientists, physicians, researchers, nurses and students interested in diabetes and related subjects. The goal of the EASD Annual Meeting is to encourage excellence in diabetes care through advances in research and education.

About ADOCIA

Adocia is a clinical-stage biotechnology company that specializes in the development of innovative formulations of already-approved therapeutic proteins. Adocia's portfolio of injectable treatments for diabetes, featuring five clinical-stage products and five preclinical products, is among the largest and most differentiated of the industry.

The proprietary BioChaperone® technological platform is designed to enhance the effectiveness and/or safety of therapeutic proteins while making them easier for patients to use. Adocia customizes BioChaperone to each protein for a given application in order to address specific patient needs.

Adocia's clinical pipeline includes four novel insulin formulations for the treatment of diabetes : two ultra-rapid formulations of insulin analogs (BioChaperone Lispro U100 and U200), a rapid-acting formulation of human insulin (HinsBet U100) and a combination of basal insulin glargine and rapid-acting insulin lispro (BioChaperone Combo). Additionally, an aqueous formulation of human glucagon (BioChaperone Human Glucagon) has recently entered clinical testing. Adocia is also developing two combinations of insulin glargine with GLP-1s (BioChaperone Glargine Dulaglutide and BioChaperone Glargine Liraglutide), two combinations of insulin lispro with synergistic prandial hormones (BioChaperone Lispro Pramlintide and BioChaperone Lispro Exenatide), and a concentrated, rapid-acting formulation of human insulin (HinsBet U500), all of which are in preclinical development.

Adocia aims to deliver “Innovative medicine for everyone, everywhere.”
